

Feadship launches *Project 827*: A vision of modern luxury

Amsterdam, 30 April 2025 – Feadship celebrates another milestone as *Project 827* emerges from the shed at the Amsterdam facility. Measuring 71.76 metres, this graceful and forward-thinking yacht is now ready for final outfitting and sea trials, marking a refined new entry into the Feadship fleet.

Project 827 features exterior design and styling by Studio De Voogt. With her elegant lines, low bulwark, and perfect proportions from bow to stern, she projects a distinctive sense of poise and calm. From the extended sundeck forward to the wide swim platform aft, the yacht masterfully blends spacious deck areas with generous interiors designed for multi-generational enjoyment. Five decks of living space, enhanced by floor-to-ceiling glass, offer a social layout that prioritises natural light, connection and flexibility.

Project 827's propulsion is driven by a next-generation diesel-electric system, a testament to Feadship's unmatched experience in hybrid innovation since the launch of *Savannah* in 2015. This future-focused approach combines IMO Tier III-compliant generators with electric thrusters, ensuring a cruising experience that is quieter, cleaner, and more responsive, with a system that is engineered to support sustainable energy solutions.

Richard Lambert, Senior Partner at Burgess commented "It has been a pleasure to have worked hand in hand with the owner and Feadship for *Project 827*; our close collaboration has resulted in a contemporary, elegant design with an impressive volume."

A dedicated owner's deck, rare for a yacht of this size, offers a panoramic master stateroom with wrap-around glass, direct access to a private breakfast area, and a hot tub. This secluded level is made possible by the raised pilothouse.

The main deck aft is the yacht's social centre. The saloon, enclosed by full-height glass, opens onto an expansive aft deck with a 7.00-metre pool and sun loungers. Teak-clad stadium steps lead down to the swim platform, reinforcing *Project 827*'s distinctive profile.

All guest accommodation is located on the main deck, where larger windows and increased ceiling height enhance the sense of space. Four staterooms and two VIP suites offer flexible comfort, with the VIPs able to combine into a full-beam suite. Beneath the aft deck, a wellness space sits just steps from the swim platform and is easily accessible to everyone on board.

Project 827 Steel hull and aluminium superstructure

Length overall: 71.76m 235'5"
Beam overall: 12.40m 40'8"
Draught (loaded): 3.45m 11'4"
